DISCLAIMER

Whilst all due care and attention has been paid to accuracy in the compilation of this catalogue, neither the vendors nor the selling agents or the representative(s) thereof assume any responsibility whatsoever for the correctness, use or interpretation of the information in this sale catalogue.

Welcome

We invite you to attend our annual Vic Cattleman's Bull Sale for 2026.

Our family graciously acknowledge the support and success of our 2025 autumn and spring bull sales.

Here at Glatz Black Angus, we offer problem-free bulls, brand marketability, consistency, post-sale service and industry-grade acclaim. These are the sound reasons why cattle breeders look to Glatz Black Angus as their preferred genetic partner.

Glatz bulls are generationally bred to be more robust, muscular and profit driven in comparison to some Angus cattle of today. Ideal for self-replacing weaner producers whose calves are finished on grass or short-term grain.

Progeny from Glatz Black Angus bulls reach premium finished carcase weights of 300-350kg in rapid time, on grass or short-term grain. This is what sets Glatz Black Angus bulls apart.

Glatz genetics can advance your self-replacing female herd. Resulting in replacement females that perform and go the distance under heavy stocking rates. Medium framed, easy-keeping and productive. For generations, there's been no compromise made on fertility and production traits, such as scrotal size, milk, and docility. Strict selection for type and structural conformation are non-negotiable.

Our cattle are endorsed by generations of deliberate breeding objectives, driven by Profitability, Predictability and Purpose, resulting in Problem Free Angus bulls.

All Glatz bulls are backed by our own industry leading 3 YEAR Guarantee.

In the instance of bull breakdown or misadventure, we provide immediate service and backup.

The bulls catalogued for this 2026 Vic Cattleman's Bull Sale represent all that we stand for in breeding profitable Angus cattle. A large proportion of the bulls catalogued are suitable for heifer joining.

We invite your inspection at our on property Vic Beef Week Open Day, from 11am on Sale Day or at any other time that's convenient.

This sale will be interfaced with AuctionsPlus with videos and live online bidding.

We look forward to seeing you at our sale, Ben and Samantha Glatz.

Be Angus Be Proud video.

Sale Information

SALE TIME

The sale is scheduled to commence at 1pm Vic daylight savings time on Wednesday 18th February, 2026. Inspections are welcome from 11am on Sale Day or at any other time that's convenient.

ONLINE BIDDING

The sale will be interfaced with AuctionsPlus. Videos available.

VIC BEEF WEEK

All bulls catalogued for this sale will be available for inspection at Vic Beef Week. Wednesday 4th February 2026, 9am-4pm. On property, 299 Caroona Lane, Branxholme, Vic.

SEmen TESTING

All bulls in this sale have passed semen motility and third-party semen morphology. For further information contact Dr Brodhi Carracher (Accredited Cattle Vets Australia) (Grampians Vet, Hamilton, Vic.) 0429 015 463.

BULL INSURANCE

Buyers are reminded that any purchases become their responsibility from the fall of the hammer. We strongly recommend that all bulls are comprehensively insured until conclusion of their first mating season.

GENETIC TESTING

All animals catalogued for sale with reasonable likelihood of possessing a copy of the recessive gene for Arthrogryposis Multiplex (AM), Neuropathic Hydrocephalus (NH), Contractural Arachnodactyl (CA) or Developmental Duplication (DD) have been DNA tested to determine their genetic status. The genetic status of every animal is clearly marked in this catalogue.

AMF, NHF, CAF, DDF = Tested Free.

AMFU, NHFU, CAFU, DDFU = Free based on pedigree, but untested.

AMC, NHC, CAC, DDC = Tested Carrier

If you have any questions in relation to genetic testing, please feel free to discuss them with us.

HERD HEALTH

All bulls have been vaccinated and boosted with 7in1 and Pestigard. Furthermore all sale bulls have been treated with Mineral Solutions and will be drenched prior to sale. All breeding age females are vaccinated with Pestigard and 7 in 1 annually.

BIOSECURITY

Glatz Black Angus hold current status of J-BAS 6. Eligible for all states of Australia.

THE GLATZ BLACK ANGUS GUARANTEE

All Glatz Black Angus bulls are backed by our own industry leading 3 YEAR GUARANTEE. In the event of a bull proven to be infertile or incapable of natural service the vendor can either offer a suitable replacement if available or issue a credit for future sales. The credit is a pro-rata value of the bull minus the salvage value. The guarantee can only apply if the bulls incapacity is not caused by injury or disease since taking delivery. Any claim must be accompanied by a relevant veterinary certificate. The vendor retains the right to obtain independent veterinary confirmation of any claim. GBA guarantee immediate service and back up if required.

STOCK HANDLING

Glatz Black Angus cattle are always handled with utmost patience and due care. Mustering is generally undertaken with 4 wheel motorbikes. The bulls have been exposed to working dogs.

SEmen MARKETING RIGHTS

The semen marketing rights for specific lots in this catalogue are to be retained by the vendor. Alterations to these conditions can be negotiated with the vendor prior to the sale.

DELIVERY

The vendor will personally deliver as many of the sale lots as possible, free of charge, to your property. These arrangements can be made after the sale.

REBATE

A 3% rebate is offered to outside agents introducing buyers to the selling agent prior to the sale and settling within 7 days. Outside agents must attend the sale to be eligible.

PHONE BIDDING

Phone bidding will be available for the sale. For further information contact Trevor Wiseman 0427 237 369 or Bernie Grant 0417 712 144.

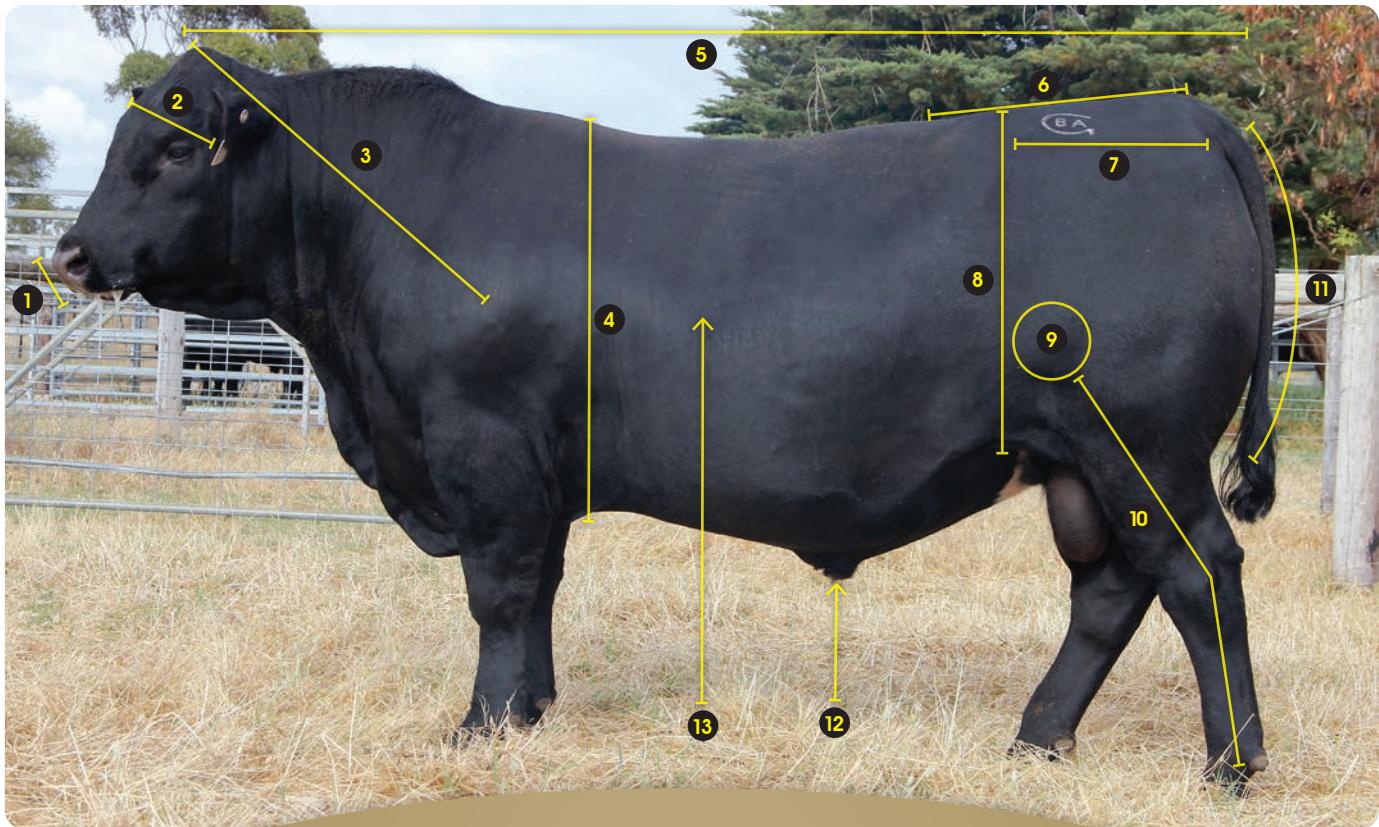

CATERING

Catering and refreshments will be available before and after the sale.

QR CODES

The QR codes in this catalogue can be scanned with your mobile device to play video material of the animal.

“The Ideal Beef Bull”

“A beef animal needs to be sound structured and free in locomotion whilst displaying quality of type. Adhering to these criteria, with some support of performance data (EBV's) when selecting bulls is best practice. Such practice will reward the profitability and sustainability of your beef breeding business.”

1. Muzzle/Jaw

A wide muzzle and prominent bottom jaw are desirable. These are essential for an animal to forage efficiently. The bottom jaw needs to be prominent from a front view.

2. Head

Width across the eyes can indicate the overall dimension of the animal. A long narrow head is generally attached to a tall and narrow animal. A particularly short and wide head is generally attached to a more moderate animal. Hooding over the eye for protection is favorable.

3. Head Carriage

Well-structured and free moving animals naturally carry their head in a somewhat elevated fashion. In a relaxed stance, these animals can comfortably maintain their ear level equal to or above the top of their shoulder.

4. Chest/Girth

The engine room. Most of the major organs are beneath. A full and deep chest/girth is a true indicator of an animal's constitution and its ability to maintain good condition. The chest/girth should blend into the animal's dimension, not as a division between the front and rear.

5. Body Length

Length of body increases weight on the scales. Heavy and well-balanced cattle have extra length across all thirds. Nose to shoulder. Shoulder to hip. Hip to pin.

6. Tail Set

A neat tail set is not just an aesthetic preference. A correct tail set should finish off the spine smoothly with minimal deviation, up or down. Higher and more prominent tail sets often coincide with high pin bones, resulting in harder calving females.

7. Hip to Pin

Cattle that are longer and angled correctly from hip to pin have more reproductive area. An angle that is close to level from hip to pin is ideal. A sloping angle from hip to pin is preferred over an increasing angle. It's not easy for a cow to push a calf up hill.

8. Depth of Flank

The depth of an animal from the hip down to its flank is a true indicator of its fleshing ability, constitution and dimension. Animals that cut up high in the flank can be harder doing, leaner and not as maternal.

9. Stifle

Bulging of the stifle muscle is an indicator of how much true muscle is within an animal. Heavily muscled bulls when examined from behind exhibit their widest point at the stifle.

10. Rear Legs

Rear leg structure is one of the most critical aspects of working bulls and functional females. Post Legged/Straight Legged bulls have a far greater risk of stifle breakdown and arthritic side effects which often co-inside with steep pastern angle. The ideal skeletal angle from stifle-hock-pastern is around 140 degrees. As this angle becomes straighter with post legged animals, their freedom of movement, suspension in movement and length of stride are compromised.

11. Butt Shape

Roundness of butt is a good indicator of muscularity in bulls. Heavier muscled bulls have an even curve that starts at the pins and continues down deep into the thigh. Lighter muscled bulls will express a straighter curve that does not fill deep into the thigh, regardless of condition. From behind, heavier muscled bulls are widest at the stifle and full between the legs. Lighter muscled bulls are widest at the hips and become narrower down to the thigh.

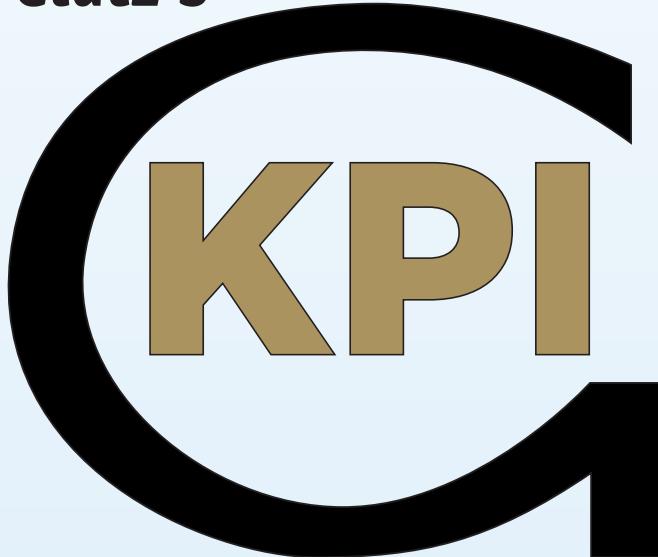

12. Sheath

Broken penises are the most common breakdown in working bulls. Selecting bulls with tighter and less pendulous sheaths can provide some defense against this. Bulls with tighter and less pendulous sheaths generally have more control during service and are less prone to sheath damage and infections.

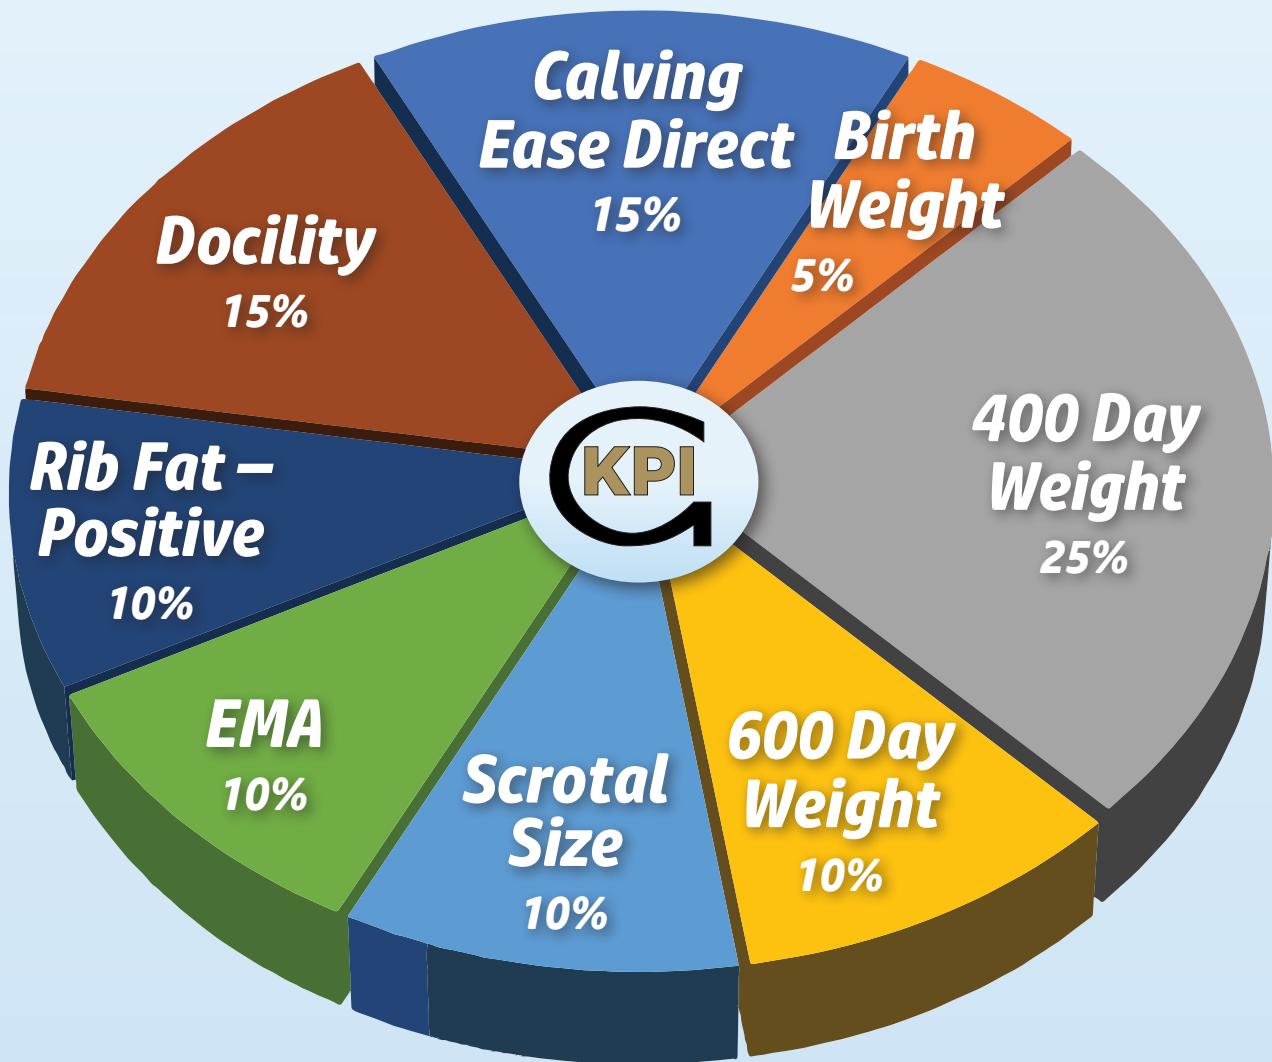

13. Hair Type

Slick, fine hair is more desirable than coarse and sometimes curly hair. Desirable hair type will often correlate to cattle that maintain good health and condition. Slick coated cattle will always present to their best at point of sale.

Glatz's

Key Performance Indicators

Glatz's "KPI" is an innovative 'EBV Only' analysis. The KPI formula has been developed in house at Glatz Black Angus and describes the sale bulls purely from an EBV standpoint. The key individual traits are combined with each individual trait's level of influence therefore establishing a total KPI value.

The KPI rates all bulls based on the EBV traits of most economic influence to Glatz's southern Australian based clientele. Self-replacing weaner producers whose calves are finished on grass or short-term grain.

Glatz's KPI specifically targets the profitability traits of its commercial cattle clients.

Note – Specific EBV's need to be considered when selecting bulls for heifer joining. We recommend Calving Ease Direct (CED) as the number one EBV of importance with some support from Birth Weight (BW) and Gestation Length (GL).

Reference Sires

Ellingson Rangeland (USA)

- * Top 2% of the breed for Foot Angle
- * Top 3% of the breed for Retail Beef Yield
- * Proven Calving Ease

Rennylea Nationwide

"We sincerely thank our loyal clients, agents, friends and community for their continued support of Glatz Black Angus."

Ben & Samantha Glatz

Black Angus Rangeland U226 – top price of \$18,000 in Feb 2024, selling to Nicolai Farms.

Understanding Estimated Breeding Values (EBVs)

Estimated Breeding Values (EBVs) are predictions of an animal's genetic merit, based on available performance data on the individual and its relatives. EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences from the breed base. As the breed base is set to a historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic change within the breed. The current breed averages are shown below. These averages provide a useful benchmark for comparing EBVs for animals.

MID-DECEMBER 2025 ANGUS BREEDPLAN

	Calving Ease		Birth		Growth						Fertility				Carcase					
	CEDir	CEDtrs	GL	BW	200	400	600	MCW	MBC	MCH	Milk	SS	CWT	EMA	RIB	P8	RBY	IMF	DOC	
	Brd Avg	+2.2	+2.9	-4.5	+3.9	+52	+93	+120	+102	+0.28	+8.1	+17	+2.2	+68	+6.5	+0.0	-0.3	+0.4	+2.5	+21

*Breed average represents the average EBV of all 2023 drop Australian Angus and Angus-influenced seedstock animals analysed in the Mid December 2025 TransTasman Angus Cattle Evaluation.

Calving Ease/Birth	CEDir	%	Genetic differences in the ability of a sire's calves to be born unassisted from 2 year old heifers.														Higher EBVs indicate fewer calving difficulties in 2 year old heifers.		
	CEDtrs	%	Genetic differences in the ability of a sire's daughters to calve unassisted at 2 years of age.														Higher EBVs indicate fewer calving difficulties in 2 year old heifers.		
	GL	days	Genetic differences between animals in the length of time from the date of conception to the birth of the calf.														Lower EBVs indicate shorter gestation length.		
	BW	kg	Genetic differences between animals in calf weight at birth.														Lower EBVs indicate lighter birth weight.		
Growth	200 Day	kg	Genetic differences between animals in live weight at 200 days of age due to genetics for growth.														Higher EBVs indicate heavier live weight.		
	400 Day	kg	Genetic differences between animals in live weight at 400 days of age.														Higher EBVs indicate heavier live weight.		
	600 Day	kg	Genetic differences between animals in live weight at 600 days of age.														Higher EBVs indicate heavier live weight.		
	MCH	cm	Genetic differences between animals in the height of mature females.														Higher EBVs indicate taller mature females.		
Maternal	MBC	score	Genetic differences between animals in the body condition of mature females.														Higher EBVs indicate more body condition of mature females.		
	MCW	kg	Genetic differences between animals in live weight of cows at 5 years of age.														Higher EBVs indicate heavier mature weight.		
	Milk	kg	Genetic differences between animals in live weight at 200 days of age due to the maternal contribution of its dam.														Higher EBVs indicate heavier live weight.		
	DtC	days	Genetic differences between animals in the time from the start of the joining period (i.e. when the female is introduced to a bull) until subsequent calving.														Lower EBVs indicate shorter time to calving.		
Fertility	SS	cm	Genetic differences between animals in scrotal circumference at 400 days of age.														Higher EBVs indicate larger scrotal circumference.		
	CWT	kg	Genetic differences between animals in hot standard carcase weight at 750 days of age.														Higher EBVs indicate heavier carcase weight.		
	EMA	cm ²	Genetic differences between animals in eye muscle area at the 12/13th rib site in a 400 kg carcase.														Higher EBVs indicate larger eye muscle area.		
	Rib Fat	mm	Genetic differences between animals in fat depth at the 12/13th rib site in a 400 kg carcase.														Higher EBVs indicate more fat.		
Carcase	P8 Fat	mm	Genetic differences between animals in fat depth at the P8 rump site in a 400 kg carcase.														Higher EBVs indicate more fat.		
	RBY	%	Genetic differences between animals in boned out saleable meat from a 400 kg carcase.														Higher EBVs indicate higher yield.		
	IMF	%	Genetic differences between animals in intramuscular fat (marbling) at the 12/13th rib site in a 400 kg carcase.														Higher EBVs indicate more intramuscular fat.		
	NFI-F	kg/day	Genetic differences between animals in feed intake at a standard weight and rate of weight gain when animals are in a feedlot finishing phase.														Lower EBVs indicate more feed efficiency.		
Structure	Doc	%	Genetic differences between animals in temperament.														Higher EBVs indicate better temperament.		
	Claw Set	score	Genetic differences in claw set structure (shape and evenness of claws).														Lower EBVs indicate less curl of the claw set.		
	Foot Angle	score	Genetic differences in foot angle (strength of pastern, depth of heel).														Lower EBVs indicate more heel depth.		
	Leg Angle	score	Genetic differences in rear leg structure when viewed from the side (angle at front of the hock).														Lower EBVs indicate a less angular leg angle.		
Selection Index	\$A	\$	Genetic differences between animals in net profitability per cow joined in a typical commercial self replacing herd using Angus bulls. This selection index is not specific to a particular market end-point, but identifies animals that will improve overall net profitability in the majority of commercial, self replacing, grass and grain finishing beef production systems.														Higher selection indexes indicate greater profitability.		
	\$A-L	\$	The \$A-L index is similar to the \$A index but is modelled on a production system where feed is surplus to requirements for the majority of the year, or the cost of supplying additional feed when animal feed requirements increase is low. While the \$A aims to maintain mature cow weight, the \$A-L does not aim to limit the increase in mature cow weight as there is minimal cost incurred if the feed maintenance requirements of the female breeding herd increase as a result of selection decisions.														Higher selection indexes indicate greater profitability.
